

ANCHORS & MASONRY SCREWS

Drop-In Anchors

Designed for solid concrete, these anchors expand internally when a setting tool is used, making them ideal for overhead or flush-mount applications.

Sleeve Anchor

A versatile anchor for concrete, brick, or block, with an expanding sleeve that provides strong, secure holding power.

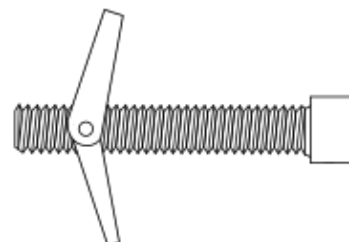

Wedge Anchor

Used in heavy-duty concrete applications, wedge anchors expand at the base as the nut is tightened for a permanent, high-load hold.

Toggle Anchor

Ideal for hollow walls, toggle anchors feature spring-loaded wings that expand behind the wall to distribute load over a wide area.

ANCHORS & MASONRY SCREWS

Plastic Anchor

Common for light-duty fastening in drywall or masonry, these anchors expand as a screw is inserted to grip the material.

Masonry Screw

Threaded screws designed to tap directly into concrete or brick without an anchor, requiring a precise pilot hole for best results.

Self-Drilling Zip Anchor

Perfect for drywall, these anchors drill their own hole and cut into the wall as they're driven, simplifying installation.

Lead Screw Anchor

Soft metal anchors that expand as the screw is driven, ideal for masonry or restoring older holes in brittle materials.
